Full/Flex Survey

The 2024 *Auto Laundry News* Full/Flex Survey was conducted by mailing and emailing questionnaires to a random selection of subscribers who own and operate conveyor car wash businesses besides exterior sites. The information presented in this report results from an analysis of data provided by respondents from locations throughout the United States.

Full-Service Sites vs. Flex-Service Sites

For comparison purposes, survey responses from full-service sites are, on occasion, tabulated separately from flex-service responses. Respondents self-identify to either the full-service or flex-service category. Full-service participants comprise 72 percent of the total, with flex-service sites accounting for 28 percent. This compares to a 75/25 split in 2022 and a 79/21 split in 2021.

Revenues

Across categories, 34 percent of respondents claimed an increase in revenue compared to last year. This represents a slight decrease from the 38 percent who reported the same last year and a massive drop from the 67 percent who enjoyed year-over-year growth two years ago. The graphic on page 35 provides a six-year perspective.

More full-service sites (36 percent) reported increases compared to their flex-serve counterparts (29 percent). While more full serves enjoyed increased cash flow, the average increase across the two formats was negligible — 8.3 percent for full serves and 8.0 percent for flex serves.

Among the sites that suffered through a decrease in revenue over the past year, flex serves lead the way with 57 percent reporting a decrease compared to the 44 percent of full serves that report the same. On average declining full serves saw an 11 percent drop in revenue compared to flex serve’s average 10 percent decrease.

Inflation

While inflation has leveled off, its effects are still felt throughout the car wash industry. Sixty-seven percent of full-service operators report increasing their prices over the past year due to inflation, with an average increase of 7.5 percent. Flex-serve sites have also increased prices but slightly less frequently and at a lower rate. Fifty-six percent of flexes report raising prices due to inflation, with an average increase of 6.4 percent.

In addition, logistics issues continue to be a thorn in operators’ sides, as 56 percent report being negatively affected by supply chain disruptions over the past year. This is an improvement from last year’s results when 75 percent reported being adversely affected. 📧
